MySQL

Jira

Informatica

Python

GraphQL

ACHIEVEMENTS

Cognizant Amber Cheers award

My performance helped the team maintain Business Continuity during COVID crisis

Automated Alerts

Recognized for automating alert to trigger as incidents using Power Automate

Client's Appraisal

Appraisal from clients for handling requests continuous within SLA

EDUCATION

Bachelor of Computer Applications

Dr. Gr R Damodaran College of Science

06/2016 - 04/2019

Grade 12

Kendriya Vidyalaya AFS Sullur

04/2015 - 03/2016

WORK EXPERIENCE

SDE-II ShopUp

03/2022 - Present

<https://shopup.org/>

ShopUp is Bangladesh's leading full-stack B2B commerce platform for small businesses. Our goal is to use technology to supercharge businesses with easy access to B2B sourcing and last-mile logistics.

- ◇ Developed new features based on requirements provided from PMs for admin panels using React with TypeScript
- ◇ Managed internal ui library to render smooth and responsive ui components across the organization
- ◇ Developed new feature and code fixes for company's Sales Rep app using react native with typescript
- ◇ developed apps with state management libraries redux and recoil and REST APIs to interact with Backend
- ◇ developed new apps with webpack Module Federation to use same code in multiple applications
- ◇ Git to commit and deploy and CI/CD to make Github workflows to test and validate before deployment
- ◇ performed unit testing for Mobile and web apps using jest and react testing library

Contact : Aravind Rajendran - 8904042440

Programmer Analyst Cognizant Technology Solutions

05/2019 - 03/2022

- ◇ Develop and deploy new features based on business requirement using react/typescript
- ◇ Developing creative webpage Elements for client using html,css an javascript
- ◇ Developers for continuous availability and maintenance of more than 5 Applications

PERSONAL PROJECTS

Forkify (08/2021 - 09/2021)

- ◇ <https://forkifyvicky.netlify.app/>
- ◇ **HTML, SCSS, Vanilla JavaScript, Parcel, Babel**
- ◇ This project lets you search food recipes from API and renders the result. API_KEY is used to add new recipe
- ◇ **SCSS** is used to design the pages
- ◇ **Local Storage** is used to Bookmark recipes which shows up for each user
- ◇ **Vanilla JavaScript** is used to manage state and customize servings and to route users when searched item is selected
- ◇ **Parcel** is used to Build the project to production. **Babel** is used to convert ES6 code

The Book Shelf (10/2021 - 11/2021)

- ◇ <https://the-book-shelf2.vercel.app/favorites>
- ◇ This project is build using **React, React-Bootstrap, Redux, Firebase, React-Router-Dom**
- ◇ This app lets organize all the books by searching for books and updating it's status and lets you mark your favorite books to check it out anytime
- ◇ **React-Router-Dom** is used to route into different pages and **Google Books API** to search for a book using a keyword, **React-Bootstrap** to design the app and make it responsive
- ◇ **Firebase** for creating, storing, authenticating users, and also as backend to store users list of books and favorite books, **React-Redux** for state management

Mapty (07/2021 - 08/2021)

- ◇ <https://legendvi.github.io/mapty/>
- ◇ **HTML, CSS, Vanilla JavaScript, Leaflet Library**
- ◇ This is track activity across locations by selecting a location using the map and entering entering activity details performed in that location
- ◇ **Leaflet Library** is used to render Map and markers State Management is done using **JavaScript** and **Local Storage** is used to retrieve data after refresh
